

PLIXXENT's Corporate Guideline on Health, Safety, Environment and Quality (HSEQ)

Health, safety, environmental protection and product quality have an outstanding importance for us. It is our declared aim to constantly review and improve our standards. With this information we would like to disclose the core elements of our HSEQ approach.

Health

Our production, our supply chain and our products shall not pose any hazard for health. We pursue this objective continuously.

Safety

Our safety management is based on three pillars.

1. Occupational safety: The safety of our employees is for us of particular importance. Together we are working on the avoidance of occupational accidents. We have the objective to reduce reportable accidents at our sites as well as on business travel to zero and keep this value constant.
2. Plant safety: According to our self-imposed standards we aim at operating our plants reliably and securely. We review these standards regularly. Furthermore, we are constantly working on the identification and reduction of risks in the operation of our plants.
3. Product stewardship: We steadily improve the development, manufacturing and handling of our products. After the correct use, our products shall be disposed safely.

Environment

It is our declared objective to constantly reduce the environmental impact of our actions and our products. Our usage of resources incl. materials and energy is characterised by high conscientiousness. Thereby, we focus on efficiency in two respects: Firstly, we develop innovative products that help our clients to sustainably improve their environmental balance. Secondly, we strive for continuous improvement and develop ourselves to save resources, reduce emissions and decrease waste.

Quality

Our procurement, our development and our manufacturing follow high quality standards. We are not resting on our laurels, but constantly continue to improve the quality of our products and processes.
