

APPLIANCES

Value Proposition

Be it food processing, freezing or refrigerated storage - in cold stores and similar facilities, the excellent thermal properties of polyurethane ensure a temperature-controlled environment. Very low temperatures don't harm the material, and the closed-cell nature of the core means that moisture cannot penetrate. PLIXXENT Appliance Systems offer a wide range of parameters such as density, flammability, and insulation properties. Depending on the application, we can adapt the system to the customer's requirements and processing possibilities.

Features & Benefits

Features	
High insulation value	
Easy Processing	3D Cavity Seal
Stiffness	
Dimensional Stability	
Benefits	
Increased efficiency	
Energy reduction	Ozone Depletion FREE foam
Light weight	
Food Preservation	

Sub-Applications

- Cooling Cabinets
- Refrigerators
- Freezers
- Food Display

About PLIXXENT

PLIXXENT is a leading provider for polyurethane (PU) systems solutions in Europe. The Company, based in Hamburg, has approximately 320 full-time employees at six locations and covers the entire application range of PU systems and CASE.
