

PIPES

Value Proposition

With excellence in durability and performance, polyurethane has proven itself for decades as the preferred insulation material in district heating pipes and joints. The material reduces energy losses, saves both money and natural resources and is the key to transporting heat and cooling over long distances.

Features & Benefits

Features

Easy Assembly	Light weight
Easy Processing	Robustness
Insulation value	
Recyclable	

Benefits

Longevity	Resistance to ageing
Environmental Friendly	Unlimited supply of eco friendly heat
Maintenance free	Durability

Sub-Applications

- District heating pipes
- District Cooling
- Technical Pipe Insulation

About PLIXXENT

PLIXXENT is a leading provider for polyurethane (PU) systems solutions in Europe. The Company, based in Hamburg, has approximately 320 full-time employees at six locations and covers the entire application range of PU systems and CASE.
